Brigham Solution Time Value Of Money
Time Value of Money Terms CFt = Cash flow at time t, a positive (negative) number indicates a cash inflow (outflow) PV = Present value, cash flow at Time 0 (today, now, present, or beginning), that is PV = CF0 FVN = Future value, value of PV = CF0 N periods into the future I = Interest rate (%) earned per period INT = Dollars of interest earned during the period, that is, INT = PVI N = Number ...

c04 Brigham Fm3ce_ppt | Present Value | Time Value Of Money
Compound this value for 1 year at 12 percent to obtain the value in the account after 6 years and before the last payment is made; it is $7,941.06(1.12) = $8,893.99. Thus, you will have to make a payment of $10,000 - $8,893.99 = $1,106.01 at Year 6, so the answer is: it will take 6 years, and $1,106.01 is the amount of the last payment.
