Connective Tissue Study Guide.

Connective tissue comprises one of the four basic tissue types. The others are: epithelial tissue (surfaces and glands), muscle tissue (contractile cells), and nervous tissue. Organs represent various combinations of these four basic tissue types, which thus comprise the entire body.

## **Connective Tissue Study Guide**

The following information identifies a few select features of connective tissue. Nerve supply. Most connective tissues have a nerve supply (as does epithelial

Connective tissue is the tissue that connects, separates and supports all other types of tissues in the body. Like all tissue types, it consists of cells surrounded by a compartment of fluid called the extracellular matrix (ECM).

# Read Online Connective Tissues Study Guide

However connective tissue differs from other types in that its cells are loosely, rather than tightly, packed within the ECM.

## **Definition and types of connective tissue | Kenhub**

Connective tissue is composed primarily of two elements: cells and a matrix. The types of cells found in connective tissue vary depending on the type of tissue they support. For example, red and...

## **Connective Tissue: Types, Functions & Disorders - Study.com**

Connective tissue: Comprised of dispersed cells with no intercellular contact, connective tissue is a fibrous tissue that supports and binds other tissues in the body. There are three main types - loose connective tissue, dense connective tissue and reticular connective tissue.

Connective tissue is one of the four basic types of animal tissue, along with epithelial tissue, muscle tissue, and nervous tissue. It develops from the mesoderm. Connective tissue is found in between other tissues everywhere in the body, including the nervous system. In the central nervous system, the three outer membranes (the meninges) that envelop the brain and spinal cord are composed of ...
